ALABAMA SPACE AND ROCKET CENTER

America's Largest Missile and Space Exhibit
Tranquility Base

Huntsville, Alabama 35807

The full-size Apollo Saturn V moon rocket is one of the feature attractions at the Alabama Space and Rocket Center. The five huge rocket engines develop seven and one half million pounds of thrust and consume propellants at the rate of 5,000 gallons per second. The complete vehicle — longer than a baseball field — can be viewed close up by the visitor. The Alabama Space and Rocket Center tells the story of man's past, present, and future efforts to explore space for peaceful purposes.
