Hts. Depot Master Plan 1978  
4A1B

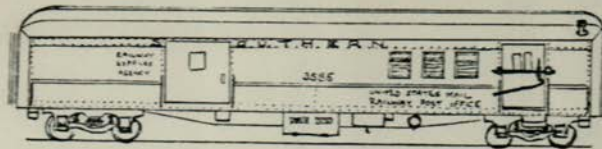

Figure 1

The interior of the car is divided into two compartments transversely by a solid metal partition midway the length of the car. The partition prevents access between the two compartments. Therefore, it is planned to build a weathertight corridor outside the car which will provide a passageway between the doors of the two compartments. A floor plan of the RPO is provided at Figure 3.

All existing 32-volt DC wiring will be removed and the RPO rewired for 110-volt AC. The regular ceiling lights and fans will be maintained for atmosphere with conduit and outlets added for spot and floodlights to be mounted at the edge of the clerestory roof. Refer to Figure 2.

Figure 2.
