> BAL - Personal Income in Ala. Counties since 1939 1458

PERSONAL INCOME IN ALABAMA COUNTIES SINCE 1939

methods and techniques of income estimation and related economic problems, it broadened its aims and continues to function as the Southeastern Economic Research Conference.

The county estimates of income payments to individuals for 1939, 1947, and 1950, developed by the Bureau of Business Research, were published in the Conference Report. The Bureau's 1953 estimates were published in Alabama Business. With the change to the personal income concept by the Office of Business Economics, the Bureau began the challenging job of reworking the estimates for the earlier years and the preparation of estimates on the new basis for 1956.

Differences between the two concepts are slight. Most important among the changes in definition is that personal income now provides broader coverage of income in kind and has a different treatment of transactions under private pension, health, and welfare plans. Two major items of income in kind not counted before are net rental value of owner-occupied dwellings and the value of food and clothing furnished members of the armed forces.

#### USES OF THE DATA

Personal income is one of the most compensive and useful measures available at both the national and state level. The extension of this measure to the county level greatly increases its usefulness. It provides not only a means of analyzing the internal aspects of the economies of small geographic areas but also facilitates direct comparisons among national, state, and county economic levels.

An analysis of income received in the counties of Alabama is especially significant in that the nature of the State's economic structure is reflected largely by the sources from which the income of its citizens is derived. Even more important is the study of changes in sources and types of income as an aid to understanding the direction and

extent of economic development within the state.

With respect to specific areas of usefulness, income data have been found to be of particular value in studying problems such as those relating to market research, industrial development, and the financing of governmental activities (e.g., education, welfare, and roadbuilding).

#### LIMITATIONS

A word of caution is necessary relative to the use of county income data. The very term "estimate" implies a margin of error. A further complication is that the error is not always measurable in terms of generally accepted probability tests. How then can the accuracy of the estimates be assessed? In part, this question may be answered by pointing out that the estimates are built up, as far as possible, from available information from official sources on actual distributions of payments to individuals by county of residence. This provides, in most cases, a reasonably accurate measure of substantial portions of the estimates.

In the absence of actual county detail, estimates for some of the factors necessarily are based on certain assumed relationships which are believed to hold generally. It is probable that there are differences in the accuracy of some of the assumed relationships among the counties. Moreover, in dealing with 67 counties as diverse as those in Alabama, some of these differences could be substantial. In other words, the estimates may come quite close for most of the counties but probably differ from the actual figures (if such were available) for some counties.

The possibility of error in allocating wages and salaries results principally from the "situs" problem. This situation arises where the worker resides in one county and is employed in another. Because this is a crucial factor in county income allocation, considerable attention has been given to it. However, it is not always possible to resolve
