Series 7, Box8, TARCOG FOLDER 5 Draft Appendix for Roberts Review; NOTES, CARRESPONDENCE, SOLUCES

NOTES ON OBTAINING OUT-OF-DATE
AERIAL PHOTOGRAPHS

The TARCOG Office in Huntsville has complete, recent, aerial photographic coverage of DeKalb, Jackson, Limestone, Madison, and Marshall Counties. The aerial photographs were obtained from the United Stated Department of Agriculture which conducted the survey in 1970. Since these photos are available for analysis, only old out-of-date photographs should be purchased.

Because of the expense involved in obtaining a complete set of old aerial photographs for the entire region, orders, for the time being, must be individual and for only the specific areas under study. Old photographs are available from the Maps and Surveys Branch of the Tennessee Valley Authority and the Cartographic Division of the National Archives and Records Service.

The Tennessee Valley Authority has possession of aerial surveys of the region dating back to 1927 when the Army first photographed the valley. Surveys were taken again in 1934 and 1946. Prints from any of these early surveys may be secured by writing the Maps and Surveys Branch, Tennessee Valley Authority, 200 Haney Bldg., Chatanooga, Tennessee. When ordering, state your full request and sketch on a map

136

the area in concern. TVA will research their files and send prints from the 1927, 1934, and 1946 surveys. A booklet on the procedures for ordering these photos, including a list of prices, is available in the TARCOG Office, Suite 350, Central Bank Building, Huntsville, Alabama.

The National Archives and Records Service has possession of aerial surveys conducted in DeKalb County (1937), Jackson County (1938), Limestone County (1937,1940), Madison County (1937, 1942), and Marshall County (1937). Again, when ordering, indicate on a map the precise areas in interest. (10" x 10" prints cost \$1.75 each). Send the order, including a check or money order payable to the National Archives Trust Fund (NNS), to the Cashier, National Archives (GSA), Washington, D. C., 20408.

Hopefully, funding will be available in the future in order that a complete old survey can be obtained from which the locations of old roads, sites, and structures can be determined.

INDEX OF MAPS

Many old maps were found during the course of this preliminary study and copies have been secured and indexed. They will be stored for use during the survey and have been catalogued in the following method.

The map index number consists of three parts, i.e. (B1:2:4). The first part (B1) indicates in which map case drawer the map is filed. Each drawer contains maps of the same coverage area (Southeast, Alabama, etc.). The second part of the index number (2) indicates in which map folder the map is found. The last part (4) refers to the number of the map, filed chronologically within the folder.

Each entry in the catalog contains a complete description of the indexed map including the title, date, geographer, size, scale, area of coverage, and the specific location where it was found. In addition, a statement of significance and utility is provided for each map.
