CHAPTER 4 MADISON COUNTY

A Geographic and Historic Sketch

Madison County was created by proclamation of Governor Robert Williams, of the Mississippi Territory, on December 13, 1808. The territory which made up the county consisted of a large triangular tract of land acquired by the United States in the Chickasaw cession of 1805 and the Cherokee cession of 1806. By an act of the territorial legislature on February 8, 1818, the dimensions of the county were enlarged. On December 13, 1819, the Alabama Legislature added to the county a tract of land lying east of the Madison County line to the Flint River. The territory east of Flint River, belonging to Decatur County, was added in 1824 when that county was abolished, giving Madison County its final shape and dimensions. 1 Madison County is unique among the other original counties of the state, in that it is the only county ever to extend its boundaries; all the other original counties had to contract their boundaries to make room for the creation of new ones, as the growth of the state necessitated.2

The county was named in honor of James Madison who at the time of the county's creation was Secretary of State. Within a year he became President of the United States. Situated in the north central part of the state, the total area of

75

Madison County is 512,000 acres, or about 800 square miles. It is bounded on the north by Giles and Lincoln Counties, Tennessee, on the east by Jackson County, on the south by Marshall and Morgan Counties, and on the west by Limestone County.

Elevations vary in the county from 200 to 1,600 feet. The topographic features of the county are varied and may be classed as river and stream bottoms, general uplands, and the mountain spurs and knobs of the Cumberland plateau. Eighteen soil types appear in the county.³

Drainage is southward into the Tennessee River through Limestone, Indian, and Aldridge Creeks, and Flint and Paint Rock Rivers. The tributaries of these streams also aid materially in supplying drainage.⁴

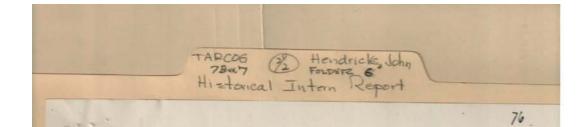

Historians have differed over the question of who was the first settler in Madison County. Some maintain that Old Man John Ditto, a Pennsylvanian, was the first settler since he is reported to have lived among the Indians at Chickasaw Old Fields as early as 1804. If not, the honor must be conceded to Joseph and Isaac Criner. These two men along with Stephen McBroom explored the northern sections of the county in 1804, and, in 1805, the two Criners' erected cabins for themselves near Criners' Big Spring on Mountain Fork, Flint River. There they met another explorer, John Hunt, who was destined to locate and settle near the Big Spring in 1805, thus becoming the founder of Huntsville.

Soon wealthy families began to arrive from Virginia and Georgia. Settlements were established along Flint River, at Huntsville, Hazel Green, Meridianville, and elsewhere. The population grew and by 1810 half the population of the Mississippi Territory resided in Madison County.

Alabama entered the Union at Huntsville on December 14, 1819. Huntsville, the Madison county seat, became the state's first capital. This town was for a short time known as Twickenham due to the insistence of Leroy Pope, the town's "father". Pope greatly admired the English writer, Alexander Pope, whose estate in England was named Twickenham. Huntsville played a significant role in the early history of Alabama. There a United States land office was placed in 1811 and remained throughout the nineteenth century.

The following Madison County settlements possed post offices prior to 1859, and thus could possible contain existing ante-bellum structures: Berkley, Haden's, Hayes' Store, Hazel Green, Huntsville, Madison Cross Roads, Madison Station, Maysville, Meridianville, New Hope, New Market, Owen's Cross Roads, Triana, and Whitesburg. By 1900, the following additional communities had come into existence: Collins, Clutsville, Poplar Ridge, Wills, Gurley, Plevna, Claud Cove, Lanier, and Monrovia. Stationary Plevna, Claud Cove, Lanier, and Monrovia.

Memphis & Charleston Railroad

Depot

Types:

Image 44 r07_07-06-000-0044 <u>Contents</u> <u>Index</u> <u>About</u>

The Memphis and Charleston Railroad, the most important transportation line in the South during the Civil War, was incorporated in 1846 and represented a dream to connect the Mississippi River at Memphis with the Atlantic Ocean at Charleston. Works on the railroad was begun in Madison County on May 21, 1852, and by October 13, 1855 the first train rolled into a temporary depot at Huntsville. Between the years 1856 and 1859, a freight depot, an engine house, a machine shop, and two car shops were erected on the Huntsville yard. In December, 1860 the present passenger depot was completed having all the latest conveniences of the time.

About thirty years after the Civil War, in 1898, the financially weak Memphis and Charleston Railroad harming Company sold to the Southern Railway System. This company had the interior of the Huntsville depot remodeled in 1912. Passenger service was discontinued in 1967, however, and was used as a freight station until purchased by the city of Huntsville with plans to restore it as a museum.

The depot, in excellent structural condition, is a two-story red brick building having a large attic which served as a third floor. It has a stone foundation and four end-interior chimneys.

3. The Twickenham Historic District

The Twickenham Historic District, which covers
70 acres and contains approximately 300 structures,
is a museum of architecture spanning sixteen decades,
containing all of the periods or styles. It contains
Huntsville's most compact collection of good architecture, much of which is 150 years old. The structures
range from a two room, two story frameFederal, to large
mansions of several periods.

Twickenham, the name chosen for the district, was derived from the first official name given to the town when it was chosen as the county seat by a board of commissioners on July 5, 1810. Within the district there are fifty-eight antebellum homes that have been identified and researched. Nine of these homes were included in the Historic American Buildings Survey of 1935. The detailed plans of these structures are on file in the Library of Congress.

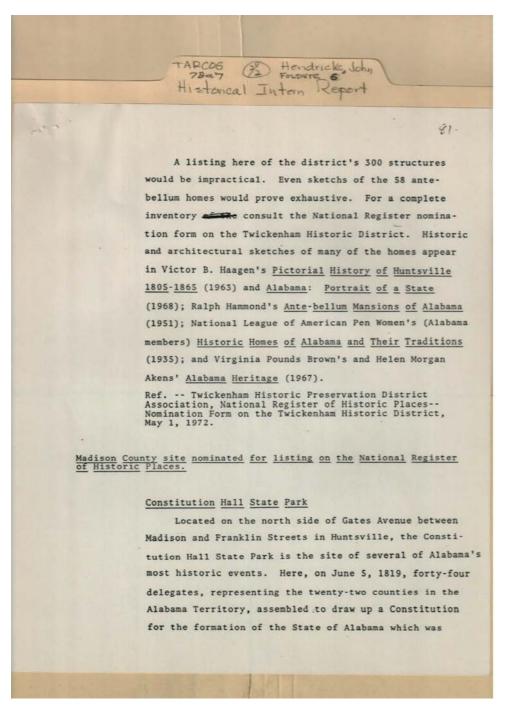

The Twickenham Historic District was officially created by ordinance of the City Council on March 23, 1972.

TARCOG B Hendricks John
7847 B Fordere 6
HIztorical Intern Report

accepted and signed August 2, 1819.

In addition to beigh the spot where Alabama entered the Union, Constitution Hall State Park is the site of Clement Comer Clay's Law Offices, the newspaper office of the Alabama Republican, the first public library in Alabama, and the residence of Stephen Neal, Madison County's first sheriff.

With the support of city and county governing bodies, the Alabama Historical Commission, and numerous other organizations and individuals, a plan was evylved to reconstruct the historic 1819 buildings and to designate the park as a historic shrine commemorating the birth of the State of Alabama. On September 16, 1970, the property was purchased by the State for the purpose of carrying out the above plan.

Ref. -- W. Warner Floyd, Director of the Alabama Historical Commission and James Record, President of the Huntsville Historical Society, National Register of Historic Places-- Nomination Form on Constitution Hall State Park, March 1, 1971.

Madison County sites and structures which, with in depth research and documentation, may become nominees for listing in the National Register of Historic Places.

1. Bell Factory

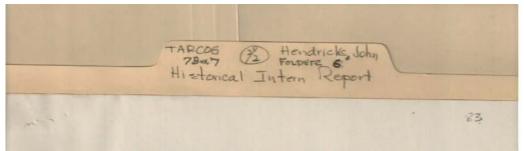

The Bell Factory was located north of Hunseville on the Flint River, a short distance south of the confluence of its three forks. It was the first cotton textile mill of any consequence in the South. Chartered

in 1832, the plant operated exclusively on water power. It had 3,000 spindles and 100 looms which were operated by skilled slave labor. The factory produced a varied selection of finished materials and maintained a city store for the sale of its goods.

In 1885, like many other rural enterprises, operations were halted at the Bell Factory (named for the large bell used to call the workers) and all that remains of the original buildings are a few foundation blocks at the river bank.

2. Cabaniss Cotton Spinning Factory

Erected by Charles Cabaniss around 1816-1818, the Cabaniss Cotton Spinning Factory was located on Barren Fork of the Flint River in the Hazel Green Township. The site was the location of Alabama's first known cotton spinning factory.

Creek Path because it was situated near the great passage leading from the Creek country in middle Alabama to the hunting grounds in the valleys of the Tennessee, the Cumberland, and Ohio Rivers. Several other Cherokee towns were located within Marshall County.

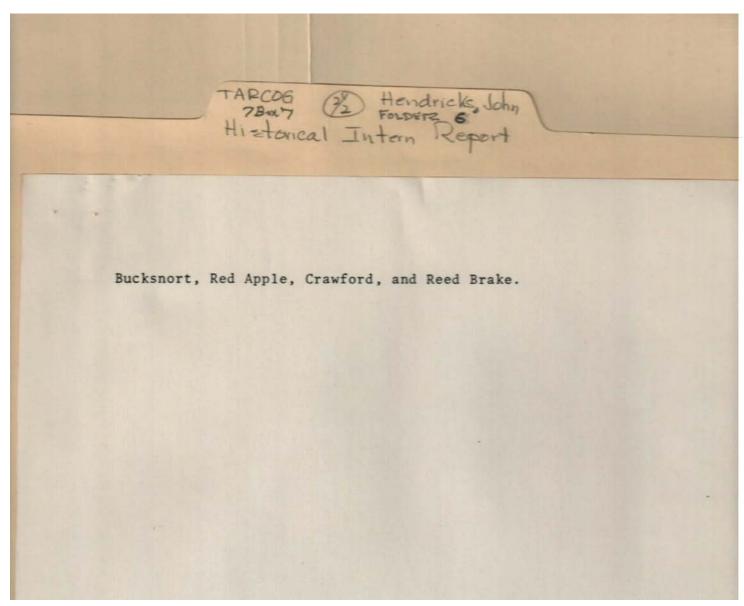

The county was first settled by immigrants from Georgia, Tennessee, and the Carolinas. Upon the formation of Marshall County in 1836, Claysville, a small village north of the Tennessee River, became the county seat by popular election. In 1838, Marshall became the county seat and continued as such until 1841, when in a general election, Warrenton was chosen. In an 1848 election, Guntersville was selected as the county seat and has remained so ever since. 3

During the Civil War, 1861-1865, the county suffered greatly from the ravages of the Union troops. Nevertheless, after 1872 it bagan to revive and more recently the economy has boomed due to the advent of the Tennessee Valley Authority in the 1930's.

The following Marshall County settlements, having post offices established prior to the Civil War, might possibly possess surviving antebellum structures: Aurora, Big Spring, Claysville, Cottonville, Guntersville, Henrysville, Hillian's Store, Kennamer, McC-oskey's, Maltonsville, Mount High, Oleander, Red Hill, Sydney, Warrenton, and Zachary. By the turn of the century the following communities and towns had come into existence: Cross Roads, Albertville, Jay Bird, Wakefield, Boshart, Honey Comb, Davidson, Kirby, Thompson,

During DeSoto's week stay at Coste, there was Indian trouble. The chief complained that his uninvited guests were robbing his corncribs and he demanded that the outrage be stopped. DeSoto settled the problem by a trick which was his consistent policy with Indian chiefs. Feigning a conciliatory ma-ner, he waited his opportunity, then seized the chief and carried him along as hostage.

22. Wassas

Wassas was a mixed Creek and Cherokee settlement which was located in Brown's Valley near the present line between Blount and Marshall Counties. It stood at a junction of two trails both leading to Ditto's Landing, one via Brown's Village, and the other by a course bending further to the west.

Ref. -- O. D. Street, Report (1901), p. 420.

Sites and Structures Located in Guntersville

23. County Jail

Located at 673 Blount Street, this structure (now a residence) was the first brick jail in the county having been constructed in 1890. The last public execution in the county was held in the structure in 1907. It was one of the most talked about events in the county's history and the handing drew a tremendous crowd to Guntersville. TARCOG B Hendricks, John
7847 B FOLDERS 6
Historical Intern Report

functions will be explained, are field surveyors and historic research coordinators
The following is a sketch of the regional historic survey plan.

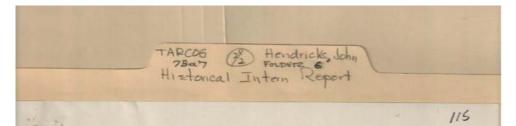

The Preliminary Research and Survey (3 Months)

The preliminary research and survey should be conducted by a historical intern whose summer's work would be used as a research index guide for the entire program. Preferably the intern should be a history major with several years experience in research and writing.

The first function of the intern is to locate and collect current and out-of-date aerial photographs of the area to be surveyed. The current maps and aerial photographs can be used for comparative analysis with the old, and their storage would provide future historians with a wealth of data about the present time. If funds are available, the current and out-of-date aerial photos should be microfilmed for preservation.

To locate and secure historic maps, one must be willing to travel to and communicate with many sources. Old maps, which aid in the location of old roads, settlements, and structures, are located in courthouses, libraries, museums, archives, private collections, and numerous agencies of the government. As soon as the intern begins his work he should write the maps and surveys divisions of the Tennessee Valley Authority, the U. S. Geological Survey, the General Services Administration of the National Archives, the U. S. Department of Agriculture,

Image 100 r07_07-06-000-0100 <u>Contents</u> <u>Index</u> <u>About</u>

the U. S. Department of the Interior, the State Department of Archives and History, the U. S. Department of Commerce, the War Department, and the Army Map Service. He should visit the county courthouses within the area, researching the records of the Probate Judge, the tax collector, the tax assessor, and the county surveyor. Local library and state archival collections should be made. If the intern works hard at these sources and follows all leads, he will compile a collection of historic maps that will greatly aid those that utilize them in the historic survey.

Old, out-of-date, aerial photographs are a bit more difficult to obtain. They are scarce and expensive to reproduce. The Cartographic Division of the National Archives and Records Service will provide the intern with index sheets, from which individual photographs can be selected. If funds are not available to purchase the index sheets, the intern may indicate on a map the precise areas in which he is interested and the available photos will be reproduced. For aerial photographs of the Tennessee Valley area dating back to 1927, the Maps and Surveys Branch of the Tennessee Valley Authority, located in Chattanooga, should be contacted.

Information about the status of current aerial photographs can be obtained from the Map Information Office of the Geological Survey in Washington. The Maps and Surveys Branch of the Tennessee Valley Authority should be contacted for recent photos of the Tennessee Valley region. Private aerial survey corporations can also provide the historic survey

Image 101 r07_07-06-000-0101 <u>Contents</u> <u>Index</u> <u>About</u>

TARCOG B Hendricks, John
1807 B FOLDER 6
HI Etorical Intern Report

116'

program with up-to-date aerial coverage.

A means of indexing the maps should be developed which the intern can catalog as he collects. The easiest method is to prepare a form containing headings under which the title, date, geographer, description, and significance of the map may be recorded. An index may be readily typed from folders of appropriately filed forms. Generally, maps are filed according to coverage area.

CORRECT

When an old map is found, steps should be taken to have it reproduced or secured so that all the research materials can be centrally located in order to facilitate the survey.

Old maps usually must be photostated for best results; inexpensive xerox copies can be made of well preserved maps if reproduction does not impair their legibility. The maps should be stored in a map case located in a nearly public or university library. After the survey is completed they may serve historians as research tools for years to come.

A preliminary survey of known historic sites within the area can be prepared after the map collecting and indexing procedures are under way. This preliminary survey should be broad in scope, leaving the time-consuming, in depth, primary research and documentation for the research coordinates. Information on all listings in the survey should be as fully foot noted as possible indicating at least the secondary research materials available on the site or structure. Such materials will give clues as to the significance of a site and facilitate later research. While the preliminary survey is conducted, a

Image 102 r07_07-06-000-0102 <u>Contents</u> <u>Index</u> <u>About</u>

TARCOG B Hendricks, John
Historical Intern Report

117

bibliography of written materials on the region's history and its historic sites and structures should be compiled. This also can be utilized in the in depth survey.

The final stage of the intern's work is the preparation of the survey program guide, containing a historic and geographic sketch of the region, a preliminary survey of historic sites and structures, an index of maps and aerial photographs, and a bibliography relevant written sources, guide should also include a description of the entire survey plan so that each participant can be fully aware of the goals and objectives of the project. When the intern's report is completed the second part of the plan will begin.

COCADINATORS The Selection and Orientation of Field Surveyors and RESEARCH

The field survey team, selected by the three co-directors, should be advanced students in the field of history or architecture. If possible, college credit should be given for their work so that in addition to the stimulus of monetary rewards, the surveyors will be motivated by the knowledge that their performance will be critically evaluated and graded, thus assuring a degree of a curacy. From four to eight surveyors should be chosen, depending on the number needed to cover the area in fifteen days of field research. Traveling in teams of two, with the less qualified person driving, the surveyors will photograph and describe the sites and structures listed in the preliminary survey plus the many others that

Image 103 r07_07-06-000-0103 <u>Contents</u> <u>Index</u> <u>About</u>

TARCOG D Hendricks, John Historical Intern Report 118 they will be trained by the architect and historian to locate and identify. For the selection of the research coordinators -- one for each county -- the directors should, if possible, consult with the intern who should be acquainted with knowledgeable professional or amateur historians in each county. Each coordinator selected should be familiar with his or her county's history and its historic sites and structures. In addition, the should be aware of individuals and source materials in his area which can be contacted and researched. After the selection of the field surveyors and research coordinators, the project coordinator should proceed to draw up contract models and hire the individuals. When hired, the surveyors and coordinators should be provided with copies of the project guide with which to prepare themselves for orientation. A one-day orientation session should be held for the field surveyors and county one week after distribution of the guides. Inventory forms, to be used by the surveyors and coordinators, should be prepared prior to the session. The forms should be drawn carefully to assure that all data necessary to meet the objectives of the survey will be included. The orientation will be conducted by the project coordinator, historian, and architect. They should come prepared to brief the surveyors and a about the project and the role each participant is to play.

The coordinator, a qualified planner from the regional

Image 104 r07_07-06-000-0104 <u>Contents</u> <u>Index</u> <u>About</u>

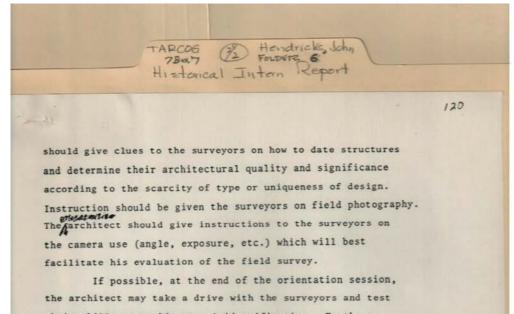

TARCOG B Hendricks, John
7807 B FOLDERS 6
Historical Intern Report

agency's staff, should present the historic survey plan, discussing the objectives and goals of the project. The project timetable should be illustrated depicting the time allotted for the surveyors' and coordinators work. The project coordinator, who will conduct the day to day management of the program, should then discuss reporting methods and present a plan for checking work progress. After a brief question-and-answer discussion, the historian will take charge of the session.

The historian should instruct the surveyors and county on the research methods to be utilized in the project. Briefing them on the research to date, the toordinaters with the materials available and give instruction on their use. The historian should give a sketch of the progression of settlement within the region, pointing out areas where the surveyors might locate old settlements and structures. Since the historian, a professional from an area college or university, will be evaluating the surveyors' work, giving grades according to performance, he or she should inform the students on what is expected of them.

The architect, knowledgeable of the various historical styles of the region from 1800 through the present, will conduct the last stage of the orientation session. He should brief the surveyors on the architectural styles particular to the area and together with the project historian should speculate as to what they will find and where. The architect

Image 105 r07_07-06-000-0105 <u>Contents</u> <u>Index</u> <u>About</u>

If possible, at the end of the orientation session, the architect may take a drive with the surveyors and test their skills at architectural identification. Further instruction could be given in the field to sharpen their competency.

With orientation complete, the field survey should begin immediately.

The Field Survey (2 Months)

In a period of two months, each of the surveyors should spend fifteen days in the field. Work could be done on weekends or any other time convenient to the participants.

Working in teams of two, the surveyors should survey all sites listed in the preliminary study and others suggested by the historian and architect. The field survey should be conducted one county at a time to assure consistency; a weak team assigned solely to one county could result in a poor or cursory coverage of the entire county area. Each county

Image 106 r07_07-06-000-0106 <u>Contents</u> <u>Index</u> <u>About</u>

TARCOG B Hendricks, John Pospers 6.
Historical Intern Report

121

could be divided along township lines into four quadrants, each of which would be assigned to a survey team for coverage. Each team could then systematically survey all streets and roads fifty years old or more, analyzing old maps and aerial photographs for possible sites and structures. Sites surveyed and photographed should be identified on topographic county highway maps. A comprehensive field survey should include some of the more modest and recent structures which also are of historic and architectural significance.

A critical evaluation of the field survey would commence just after its completion.

Review and Evaluation of the Field Survey (1 Month)

The coordinator, historian, and architect should review and evaluate the findings of the field survey and develop a priority system that will enable them to select the sites and structures to be researched in depth by the county research coordinators.

**Restorict of the survey project of the most difficult and selected operation of the survey project. In some instances the selection of a well-protected structure of great historic significance must be weighed against the selection of a less significant structure in danger of destruction. Endangered historic structures must be of the first priority, superseded only by another endangered structure of greater importance and

Frances Cabaniss Roberts Collection: Series 7, Box 7, Folder 6

TARCOG B Hendricks, John
7847 Forder 6
Historical Intern Report

significance. Of course, as in all human endeavors where time and money are involved, some less significant sites must necessarily be omitted from extensive research.

122

Other factors to be considered in selecting those sites and structures for extensive research are the standards for inclusion in the National Register of Historic Places.

Since listing National Register of the surveyed sites and in the National Register of the surveyed sites and in the National Register of the project, special structures is one major objective of the project, special priorities must be considered attention should be given these qualifications.

These qualifications.

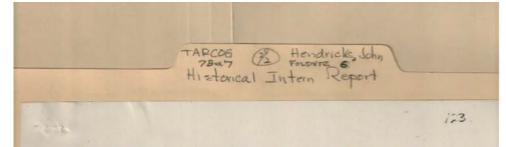

Structures less than fifty years old are difficult to list as are those whice have been extensively remodeled, altered, or moved. Historic significance, supported by valid documentation, is also important in determining the acceptance of a site or structure for admittance to the National Register of Historic Places.

These are but a few of the matters which the directors must consider in evaluating the peliminary and field surveys. When the choice is complete the coordinators must be given the task of completing the survey forms on the selected sites and structures.

Completion of Survey Forms (2 Months)

The survey form, as prepared by the coordinator, historian, and architect, will include all items necessary to complete fully the National Register of Historic Places coordinater nomination form. For two months each county

Image 108 r07_07-06-000-0108 Contents Index About

labor to complete the forms on those sites and structures selected in his or her county. In this in depth survey project the research coordinators will be assisted by the architect, historian, coordinator, and the research to date.

Preparation of the Historical Survey Pamphlet and Completion of National Register Nomination Forms (3 Months)

After the coordinators complete the survey forms, the three directors should review the work and prepare an outline for a survey pamphlet. When the outline is complete workers should be selected to write the pamphlet. The preparers should be thoroughly familiar with the entire project and preferably should be a joint committee of the three directors.

Following the completion of the survey pamphlet, work should begin on the preparation of National Register nomination forms. With reference to the project's survey forms and pamphlet, the nomination sheets should be easily completed.

Typing, printing, and publications of the survey pamphlet should be under the supervision and control of the project coordinator.

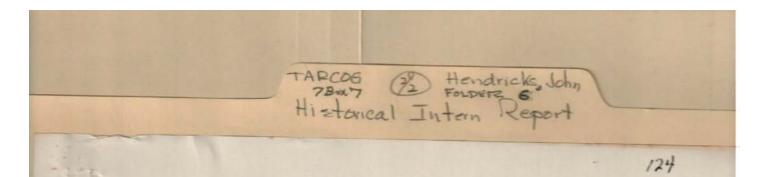

Conclusion

As stated earlier, this plan, if properly executed, can produce a thorough, in depth, historic survey of any county or region. Numerous historic sites and structures would be

Types:

plan

nominated for inleusion in the National Register which would otherwise be overlooked in a brief and unorganized cursory survey. The proposal, with only a few alterations, could be readily adapted for use by other agencies. The Tennessee Valley Authority and its tributary organizations and agencies could implement this plan for other areas outside the TARCOG region. A survey of this large for could be used in evaluating the cultural impact of existing and proposed industrial development and expansion within the area. Giving a boom to the tourist industry, such a survey would further establish the historic significance of the region and insure the preservation of its rich heritage.

TARCOG 78007 Historical Intern Report historians should be provided with copies of the project manuel with which to prepare themselves for orientation. A one-day orientation session should be held for the field surveyors and county historians one week after distribution of the manuels. Inventory forms, to be used by the surveyors and historians, should be prepared prior to the session. The forms should be drawn carefully to assure that all data necessary to meet the objectives of the survey will be included. The orientation will be conducted by the project coordinator, historian, and architect. They should come prepared to brief the surveyors and historians about the project and the role each participant is to play. The coordinator, a qualified planner from the regional agency's staff, should present the historic survey plan, discussing the objectives and goals of the project. The project timetable should be illustrated depicting the time allotted for the surveyors and historians work. The coordinator, who will conduct the day to day management of the program, should then discuss reporting methods and present a plan for checking work progress. After a brief question - and - answer discussion, the historian will take charge of the session. The historian should instruct the surveyors and county historians on the research methods to be utilized in the project. Briefing

TARCOG (2) Hendrick Hendricks, John them on the research to date, the historian should acquaint the surveyors and historians with the materials available and give instruction on their use. The historian should give a sketch of the progression of settlement within the region, pointing out areas where the surveyors might locate old settlements and structures. Since the historian, a professional from an area college or university, will be evaluating the surveyors' work, giving grades according to performance, he or she should inform the students on what is the expected of them. The architect, knowledgeable of the various historical styles of the region from 1800 through the present, will conduct the last stage of the orientation session. He should brief the surveyors on the architectural styles particular to the area and together with the project historian should speculate as to what they will find and where. The architect should instruct the surveyors on how to date structures and determine their architectural quality and significance, according to the scarcity of type or uniqueness of design. A "crash course" speed be given the surveyors on field photography. The architect should give instructions to the surveyors on camera use (angle, exposure, etc.) which will best facilitate his evaluation of the field survey. If possible, at the end of the orientation session, the architect should take a drive with the surveyors testing their skills at architectural identification. Further instruction could be given in the field to sharpen their competency.

TARCOG (2) Hendricks, John
7807 (2) Fordere 6
Historical Intern Report

With orientation complete, the field survey should begin immediately.

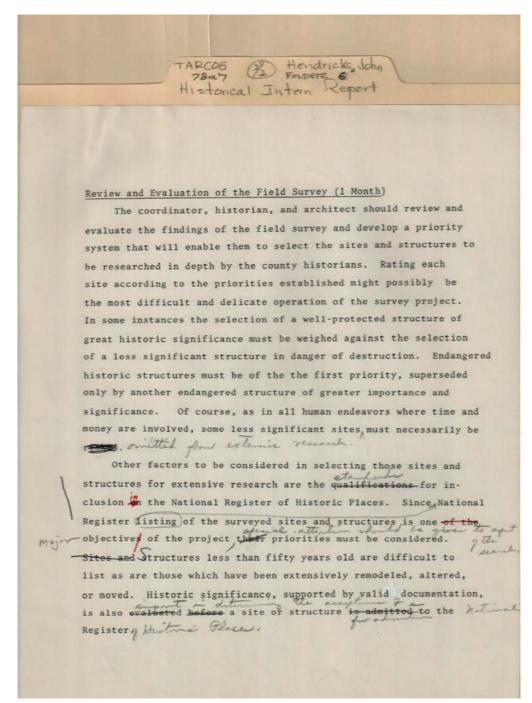

The Field Survey (2 Months)

In a period of two months, the surveyors should each spend fifteen days in the field. Work could be done on weekends or any other time convenient to the students.

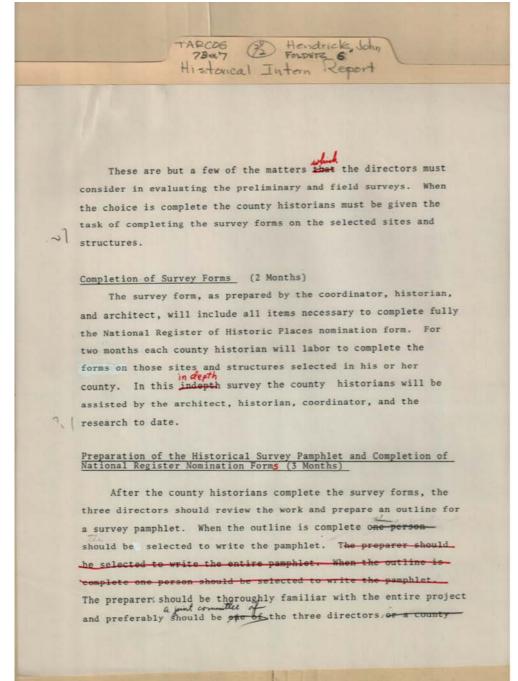

which would be assigned to a survey team for coverage. Each team would systematically survey all streets and roads fifty years old or more, analysing old maps and aerial photographs for possible sites and structures. Sites surveyed and photographed should be identified on a topographic county highway maps. A comprehensive field survey which also are of historic and architectural significance.

A critical evaluation of the field survey would commence just after its completion.

NOTES ON OBTAINING OUT-OF-DATE
AERIAL PHOTOGRAPHS AND AN INDEX OF MAPS

(AERIAL PHOTOGRAPHS)

The TARCOG Office in Huntsville has complete, recent, aerial photographic coverage of DeKalb, Jackson, Limestone, Madison, and Marshall Counties. The aerial photographs were obtained from the United States Department of Agriculture which conducted the survey in 1970. Since these photos are available for analysis, only old out-of-date photographs should be purchased.

Because of the expense involved in obtaining a complete set of old aerial photographs for the entire region, orders, for the time being, must be individual and for only the specific areas under study. Old photographs are available from the Maps and Surveys Branch of the Tennessee Valley Authority and the Cartographic Archives Division of the National Archives and Records Service.

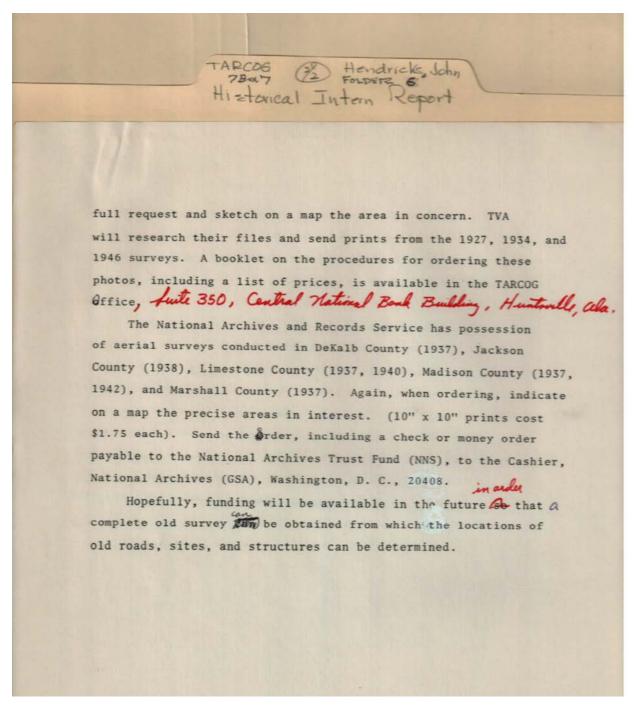

The Tennessee Valley Authority has possession of aerial surveys of the region dating back to 1927 when the Army first photographed the valley. Surveys were taken again in 1934 and 1946. Prints from any of these early surveys may be secured by writing the Maps and Surveys Branch, Tennessee Valley Authority, 200 Haney Bldg., Chattanooga, Tennessee. When ordering, state your

the area in concern. TVA will research their files and send prints from the 1927, 1934, and 1946 surveys. A booklet on the procedures for ordering these photos, including a list of prices, is available in the TARCOG Office, Suite 350, Central Bank Building, Huntsville, Alabama.

The National Archives and Records Service has possession of aerial surveys conducted in DeKalb County (1937), Jackson County (1938), Limestone County (1937,1940), Madison County (1937, 1942), and Marshall County (1937). Again, when ordering, indicate on a map the precise areas in interest. (10" x 10" prints cost \$1.75 each). Send the order, including a check or money order payable to the National Archives Trust Fund (NNS), to the Cashier, National Archives (GSA), Washington, D. C., 20408.

Hopefully, funding will be available in the future in order that a complete old survey can be obtained from which the locations of old roads, sites, and structures can be determined.

TARCOG 32 Hendricks, John Historical Intern Report

INDEX OF MAPS

Many old maps were found during the course of this preliminary study and copies have been secured and indexed. They will be stored for use during the survey and have been catalogued in the following method.

The map index number consists of three parts, i.e. (B1:2:4). The first part (B1) indicates in which map case drawer the map is filed. Each drawer contains maps of the same coverage area (Southeast, Alabama, etc.). The second part of the index number (2) indicates in which map folder the map is found. The last part (4) refers to the number of the map, filed chronologically within the folder.

Each entry in the catalog contains a complete description of the indexed map including the title, date, geographer, size, scale, area of coverage, and the specific location where it was found. In addition, a statement of significance and utility is provided for each map.

Frances Cabaniss Roberts Collection

Preferred Citation: Frances Cabaniss Roberts Collection, Archives and Special Collections, M. Louis Salmon Library, University of Alabama in Huntsville, Huntsville, AL.

Collection Scope and Content: The Collection of 114 Linear ft. includes a total of 156 Archival Boxes. The Frances Cabaniss Roberts collection covers the historical records of the Cabaniss Roberts family. This collection contains extensive correspondence records of the Cabaniss Roberts family circa 1830 to 1930.

Archives/Special Collections Access Restrictions: None

Conditions Governing Use: This material may be protected under U. S. Copyright Law (Title 17, U.S. Code) which governs the making of photocopies or reproductions of copyrighted materials. You may use the digitized material for private study, scholarship, or research. Though the University of Alabama in Huntsville Archives and Special Collections has physical ownership of the material in its collections, in some cases we may not own the copyright to the material. It is the patron's obligation to determine and satisfy copyright restrictions when publishing or otherwise distributing materials found in our collections.

Provenance: Gift of Johanna Shields on October 28, 2006.
