"ALABAMA'S PEOPLE" (1945)  
by Lillian Worley

## *Alabama...*

contained 2,832,961 people in 1940. Its population has grown during every decade since 1820, but more slowly (except for the decade ending with 1900) since the Civil War than that of the nation.

together with the South and the nation suffered a considerable decline in the rate of population growth in the decade ending 1940. By July 1, 1944, the State had lost about 15,000 persons (exclusive of armed forces overseas) since 1940. Its population has been extremely mobile the last five years.

has a greater population density than either the South or the nation. The counties in the northern part of the State are more densely populated than those of South Alabama, many of which have suffered considerable losses since 1900.

is predominantly a rural State: in 1940 70 per cent of its people lived on farms and only 30 per cent in cities.

nevertheless shows a decided tendency toward urbanization, for its cities are growing in both number and size. It is a State containing many small towns: in 1940 only 14 of its cities had more than 10,000 people and only 59 had more than 2,500.

has a population which is 65 per cent white and 35 per cent Negro. Its white population is growing, its Negro population (by comparison) decreasing. The white males outnumber the females, but the reverse is true for Negroes. Males are relatively much more numerous in rural than in urban areas. The State's heaviest concentration of Negroes is found in the rural Black Belt and adjacent counties.

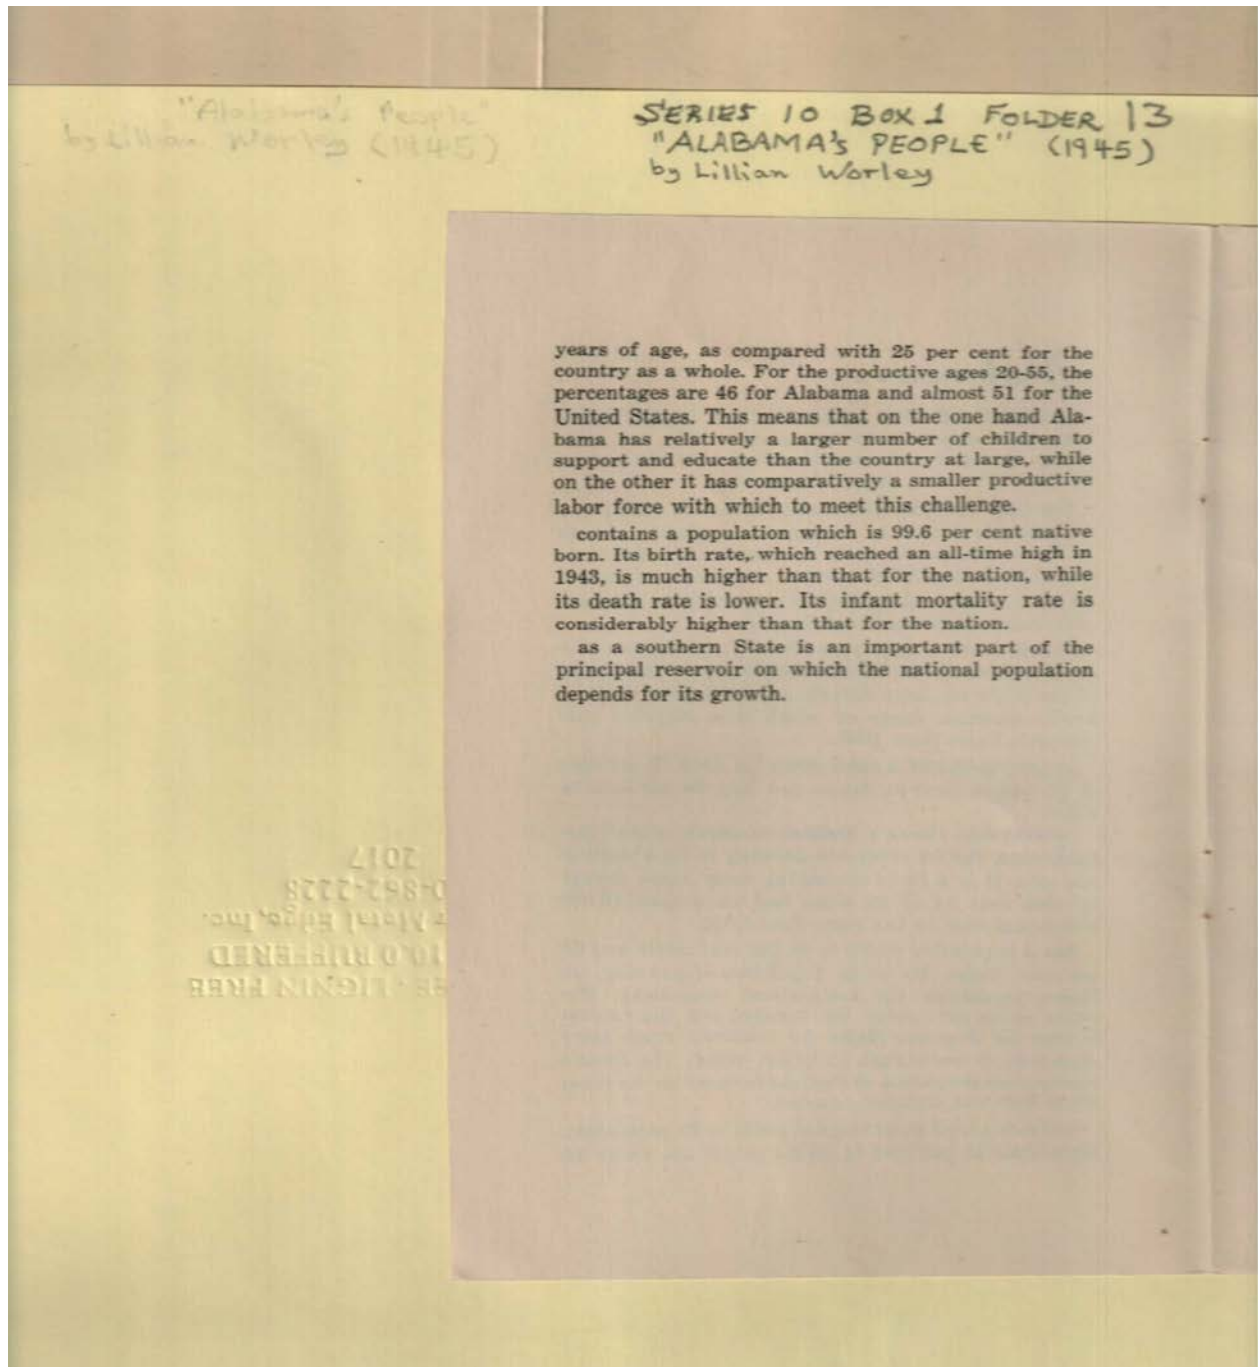

contains a high percentage of youth in its population. More than 32 per cent of all its people are under 15

CHAPTER I  
 TRENDS IN NATIONAL, REGIONAL, AND  
 STATE POPULATION

*Rate of Growth.* The Census of 1810 reveals that Alabama, then a part of the Mississippi Territory, had a population of 20,845. Alabama with its present boundaries became a State in December 1819. By 1820, the population had risen to 127,901; and since 1820 growth has continued until the State's population stood at 2,832,961 in 1940. Every decade has witnessed some increase in population (see Table I). The rate of growth was much greater in the first two decades of statehood than thereafter. In only three decades has the percentage of population growth been less than 10 per cent: these were the decades of the Civil War, the first World War, and the great depression. Population growth in Alabama has tended to parallel that of the

TABLE I  
 DECENNIAL PERCENTAGE INCREASES IN POPULATION IN THE  
 UNITED STATES, THE SOUTH,<sup>a</sup> AND ALABAMA,<sup>b</sup> 1830-1940

| Year | United States | The South | Alabama |
|------|---------------|-----------|---------|
| 1830 | 33.5          | 29.2      | 142.0   |
| 1840 | 32.7          | 21.8      | 90.9    |
| 1850 | 35.9          | 29.2      | 30.6    |
| 1860 | 35.6          | 23.9      | 25.0    |
| 1870 | 22.6          | 10.4      | 3.4     |
| 1880 | 30.1          | 34.4      | 26.6    |
| 1890 | 25.5          | 21.3      | 19.9    |
| 1900 | 20.7          | 22.4      | 20.8    |
| 1910 | 21.0          | 19.8      | 16.9    |
| 1920 | 14.9          | 12.7      | 9.8     |
| 1930 | 16.1          | 14.3      | 12.7    |
| 1940 | 7.2           | 10.1      | 7.1     |

<sup>a</sup> The South is used here as the census defines it to include Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma, and Texas.

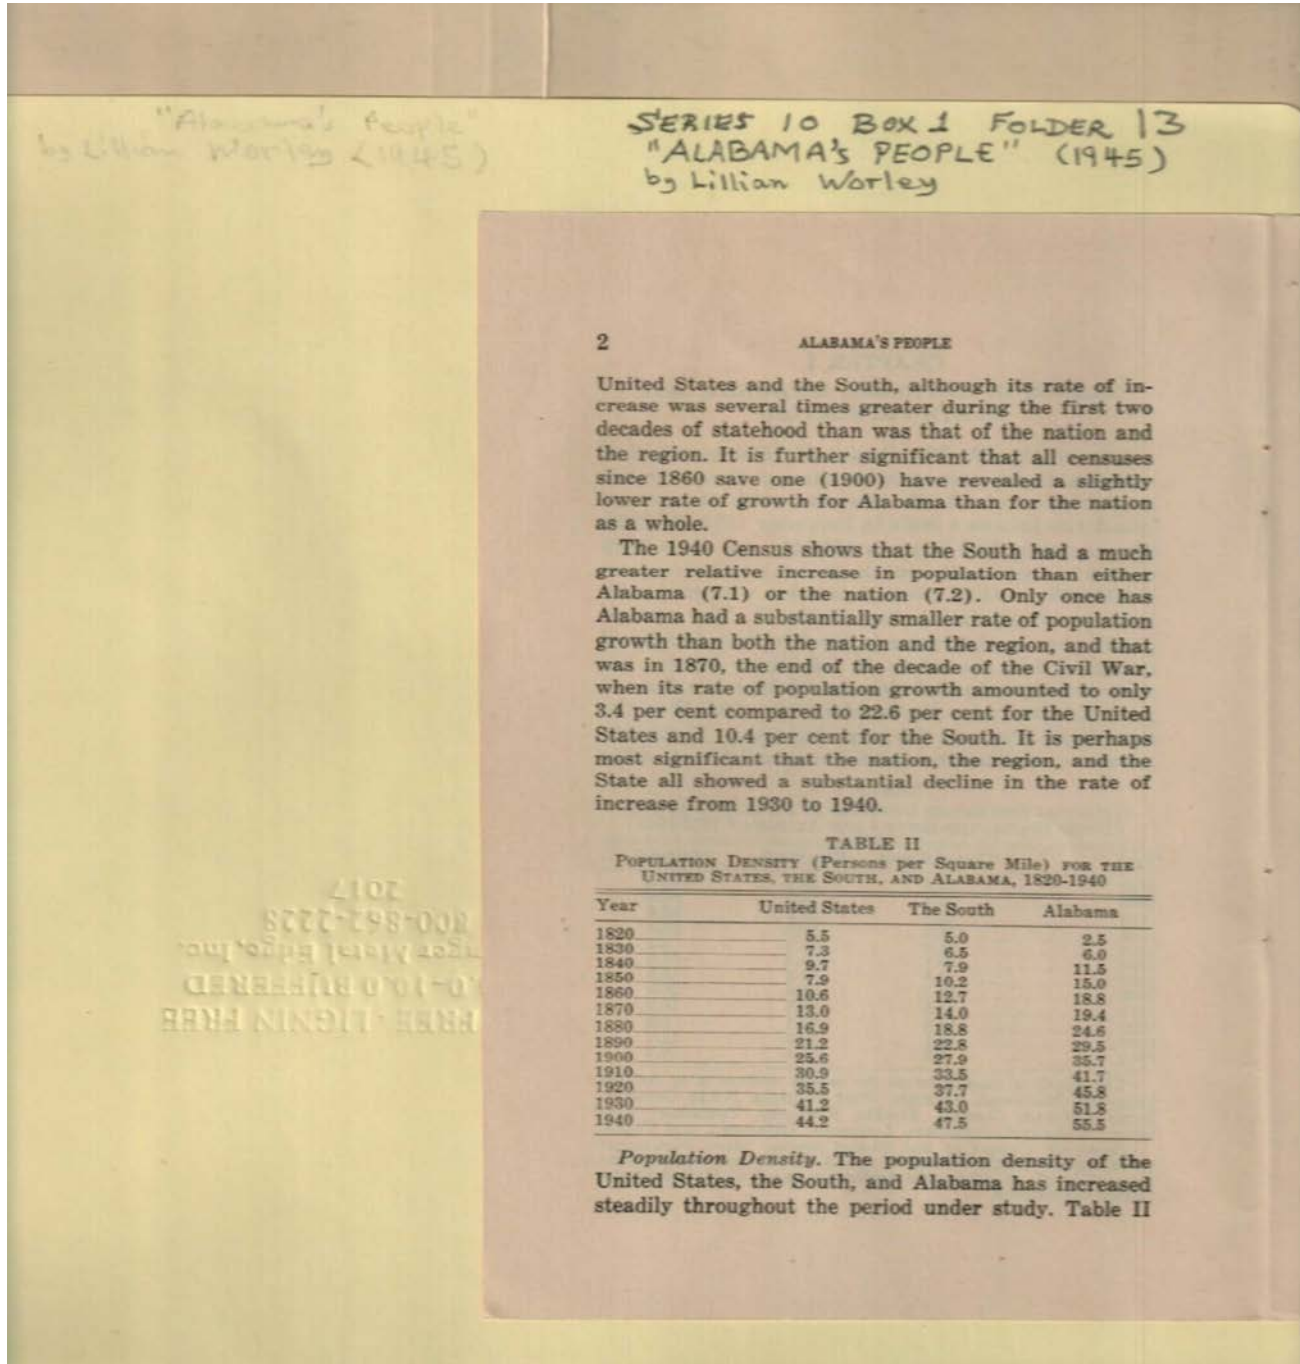

<sup>b</sup> *Sixteenth Census of the United States, 1940: Population* (Washington, 1942). Volume I, pp. 16, 69. Except where otherwise indicated, all subsequent tables are based on United States Census tabulations.

NATIONAL, REGIONAL, AND STATE TRENDS 3

shows that almost from the beginning Alabama has had a population density greater than that of the nation and the region, while the region in turn has had a greater density than that of the nation. It is worth noting that the increase in population density for Alabama after the first two decades has been greater than that for the United States except in 1920, when it was slightly less. The increase in population density has been larger in three decades (1870, 1920, 1940) for the South than for Alabama.

*Rural and Urban Population.* The trends in rural and urban population growth in Alabama tend in general to parallel those for the United States from 1820 to 1940 (see Table III). However, the contrast between the extent of urbanization in Alabama and in

TABLE III

NATIONAL, REGIONAL, AND STATE TRENDS 7

According to Table VI, the number of males per 100 females in the urban population of Alabama had decreased from 95.4 in 1920 to 89.5 in 1940, both whites and Negroes showing a steady loss. The number of Negro males per 100 females in the urban population has been consistently smaller than the number of white males. In the rural non-farm group, the females definitely outnumber the males among the Negroes after 1920. The number of males per 100 females in both races had tended to decrease steadily in both the urban and rural non-farm groups. In the rural farm group the males predominate among the whites, and since 1920 there has been a one point increase. While the Negro males have been definitely outnumbered by Negro females in the rural farm group, they have shown a steady increase since 1920.

readily understand the economic disadvantages under which Alabama (and indeed the South as a whole) must labor.

Upon further examination the table reveals some interesting facts regarding racial distribution among the several age groups. For both the nation and the State, the greater percentage of Negroes is found in the age group under 25, but the percentage is considerably larger for Alabama (54.3 per cent) than for the United States (49.5 per cent). There are 51.1 per cent whites in this group in Alabama as compared to 42.5 per cent for the nation. In all other age groups

the percentage of white population is larger, although in comparison with previous censuses the percentage for both races in these groups is increasing. For both the nation and the State, Table VII indicates a somewhat shorter life span for Negroes than for whites.

Table VIII shows that Alabama's youthful population is greater on the farm, the largest per cent

11

(37.2) of the rural element being under 15; the comparable figures for rural non-farm population is 32.1 per cent and for urban 25. This means that it is the rural areas which have the most children to educate and care for and the smallest labor force to support them. In the rural non-farm group the population is older, the largest per cent (38.5) being in the group 25 to 54. The figures for the rural non-farm group conform rather closely to the State average for all classes. The urban population is much older than either the rural farm or rural non-farm group. There are more urban people (44.7 per cent) between the ages of 25 and 54 than there are 24 and under (44.4 per cent). The percentage of folk in age groups over 54 is about the same for all classes. These figures serve to emphasize the point previously made that, as compared with the towns and cities, the rural areas have more children to educate and care for and a smaller labor force to support them.

A comparison of the figures of Table VIII with corresponding figures from the 1930 Census indicates that the proportion of children is decreasing and the percentage of folk in the 25-54 age group is rising. For example, children under 15 accounted for 40.6 per cent of the rural farm total in 1930 as compared to 37.2 in 1940. At the same time the 25-54 age group in the rural farm class rose from 29.4 per cent in 1930 to 31.5 in 1940. It is thus evident that the preponderance of children is slowly being modified. In other words, the population contains relatively fewer children and more mature people as time goes on.

*Population Distribution According to Place of Birth.*  
It is not surprising to find that the nation has a smaller native-born element in its population than does Alabama. The 1940 Census showed 91.2 per cent of the population of the United States to be native-born and

13

State declined steadily until 1933. After 1933 the national birth rate rose consistently, reaching in 1941 its highest point since 1927. Alabama's birth rate, on the other hand, fluctuated. With the coming of the war, the State's birth rate experienced a rise. Recent figures released by the State Health Department reveal that in 1943 Alabama's birth rate increased to 26.2 per 1,000 population, a rate higher than that for any previous year for which registration data are available. By 1944 the birth rate had dropped to 25.2, which is higher than the rate for any year since 1927 with the exception of 1943.

A study of crude death rates (exclusive of still births) shown in Table X reveals that, in general, the death rate is lower for Alabama than for the nation.

TABLE X  
NUMBER OF DEATHS PER ONE THOUSAND POPULATION,  
UNITED STATES AND ALABAMA, 1927-1941

|               | 1927 | 1929 | 1931 | 1933 | 1935 | 1937 | 1939 | 1941 |
|---------------|------|------|------|------|------|------|------|------|
| United States | 11.3 | 11.9 | 11.1 | 10.7 | 10.9 | 11.3 | 10.6 | 10.5 |
| Alabama       | 10.4 | 12.3 | 10.6 | 10.0 | 10.3 | 11.0 | 10.0 | 10.1 |

For the years shown, only in 1929 did Alabama's death rate exceed that of the United States. A more detailed examination of vital statistics than is offered in the table shows that Alabama has a much higher infant mortality rate than does the nation as a whole. An appreciable reduction in infant mortality therefore would give the State an even greater advantage over the national rate.

Table XI shows birth and death rates by race for the nation and the State for the year 1941. It will be noted that the birth rate for both is larger for Negroes than for whites. An interesting fact revealed by the table is that the death rate for both whites and Negroes is smaller for Alabama than for the United States.

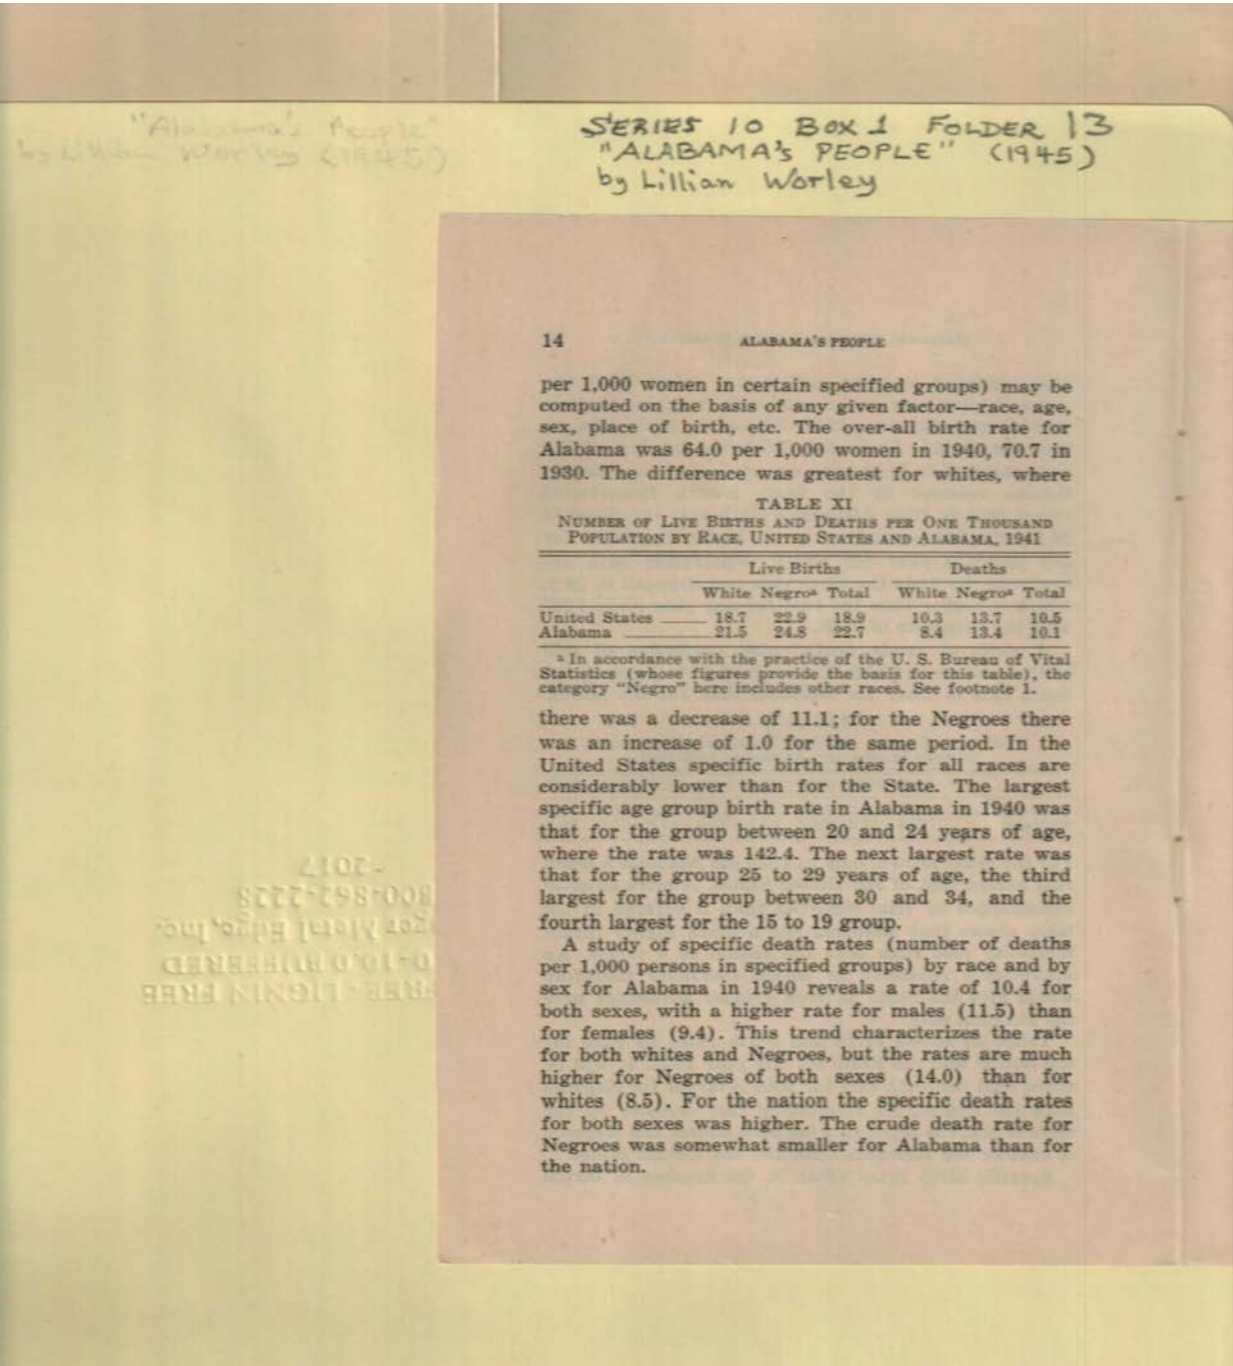

Specific birth rates (that is, the number of births

CHAPTER II  
POPULATION TRENDS FOR THE STATE  
AND ITS COUNTIES

*Population Growth for the State as a Whole.* The story of Alabama's population growth is best told in two tables, one (Table XII) showing growth for the State as a whole, another (Table XIII) showing growth by counties. Table XII shows that Alabama experienced its greatest population growth in the early decades, striking an all time low in the decade of the Civil War, when its increase amounted to only 3.4 per cent. Population growth declined fairly steadily from

TABLE XII  
POPULATION OF ALABAMA, WITH DECENNIAL PERCENTAGE  
INCREASES, 1820-1940

| Year | Population | Decennial<br>Percentage Increase |
|------|------------|----------------------------------|
| 1820 | 127,901    | -                                |
| 1830 | 309,527    | 142.0                            |
| 1840 | 590,756    | 90.9                             |
| 1850 | 771,623    | 30.6                             |
| 1860 | 964,201    | 23.0                             |
| 1870 | 996,992    | 3.4                              |
| 1880 | 1,262,505  | 26.6                             |
| 1890 | 1,513,401  | 19.9                             |
| 1900 | 1,828,697  | 20.8                             |
| 1910 | 2,138,093  | 16.9                             |
| 1920 | 2,348,174  | 9.8                              |
| 1930 | 2,646,248  | 12.7                             |
| 1940 | 2,832,961  | 7.1                              |

26.6 per cent in 1880 to 7.1 per cent in 1940, a trend which reflects a declining birth rate as well as a more mature economy.

*Population Growth by Counties.* Although the area of the State has remained constant, the number and size of counties have undergone several changes. Houston, the last county to be organized, was created

STATE AND COUNTY TRENDS

17

in 1903 from parts of Dale, Geneva, and Henry Counties. As recently as the past decade, four counties (Cherokee, Etowah, Lee, and Russell) have had their boundaries modified; but in general there have been few changes since 1880.

Growth in county population was most rapid in the formative years of the State's development (see Table XIII). Butler County in the Wiregrass (see Map I) showed more than 300 per cent increase in the decade ending in 1830; four counties experienced increases of more than 200 per cent (Greene and Wilcox in the Black Belt, Autauga in the Upper Coastal Plain, and Lauderdale in the Tennessee Valley); and five more (Dallas and Marengo in the Black Belt, Franklin in the Upper Coastal Plain, Shelby in the Limestone Valley, and Mobile in the Gulf Region) had increases of more than 100 per cent. With few exceptions, the counties continued to show steady gains in population growth until the Civil War and Reconstruction. In 1840 four counties suffered population losses varying from 2.9 per cent to 11.2 per cent; three of these, Lawrence, Limestone, and Madison, were in the Tennessee Valley, and the remaining, St. Clair, was in the Limestone Valley region. In 1850 four counties experienced losses; these counties were scattered, Jackson in the Tennessee Valley, Dale in the Wiregrass, Sumter in the Black Belt, and Washington in the Piney Woods. In 1860 six counties, Chambers in the Piedmont, Lawrence and Limestone in the Tennessee Valley, Franklin and Macon in the Upper Coastal Plain, and Greene in the Black Belt, suffered population losses.

The effect of the Civil War is dramatized by the fact that 40 of the then 52 counties suffered losses in population ranging from 1.9 per cent in Limestone to 57 per cent in Franklin. Eleven had losses ranging up

STATE AND COUNTY TRENDS

27

ties having a density of more than 60 per square mile are found in South Alabama, whereas 11 such counties lie in North Alabama. Conversely, only 10 of the 31 counties having a density less than 40 are found in North Alabama. These figures serve to emphasize in yet another way the growing extent of urbanization and industrialization in northern Alabama and, in general, the continued agrarian character of the southern part of the State.

*Population Distribution According to Race.* Alabama's population is composed mainly of two racial groups, the white and the Negro. The percentage of persons belonging to races other than these two has been so small that in this study persons of other races, unless otherwise specified, have been grouped under the classification "white."

Table XIV and Map IV, which indicate the distribution of Negro population by counties, reveal that the bulk of the Negroes has always been located in the southern portion of the State, and more specifically in the Black Belt and counties adjacent to it. Until recently the Negro tended to concentrate in those counties better suited to large-scale farming. In 1860, 20 out of the 52 counties then in existence had more than half of their population Negro, 18 in the southern part of the State and two in the Tennessee Valley. By 1940, only 17 of the 67 counties had more than 50 per cent Negroes in their population. All 17 of these counties are in the Black Belt, as delineated on Map I, or are adjacent to it. Furthermore, they all correspond generally to those counties having a large percentage of their population rural.

Map IV and Table XIV show that the Mineral (with the exception of Winston) and Wiregrass counties have had considerable increases in the percentage of Negro population since 1860, while the Tennessee

CITY TRENDS

33

*Population Changes in Incorporated Areas.* In 1940 Alabama had 14 cities having more than 10,000 people (Table XVII). One of these, Birmingham, had a population of more than 200,000, two had between 50,000 and 100,000, four between 20,000 and 50,000, and seven between 10,000 and 20,000. Seven of these cities had their most rapid growth in the decade ending in 1890 which marked the beginning of industrialization in the State. Birmingham, thanks largely to the annexation of several outlying places, had a second boom period in the decade ending in 1910, when Gadsden also saw its greatest growth. Mobile had its largest population increase in 1840, Montgomery in 1850, and Selma in 1870. Bessemer had its maximum growth in the 20 year period ending in 1920 and Fairfield in the decade ending in 1930. This growth parallels the expansion of the iron and steel industry in the Birmingham district.

Table XVII reveals that only two of Alabama's larger cities, Florence and Mobile, showed an increasing rate of growth in the decade ending in 1940. In the former, growth is due to the location of industry there following the development of the Tennessee Valley Authority. With port improvements and extended commercial relations for the State, it was only to be expected that Mobile's population should show new growth. Gadsden, with its rapid industrial development, was Alabama's fastest growing city in the 1930's, with a 53.8 per cent increase in its population. This increase, however, represented about a 9 per cent decline in rate of growth from the preceding decade. Considerable growth was experienced by Tuscaloosa, but here likewise growth was not as great as in the preceding decade.

Alabama has 16 cities with populations of 5,000 to 10,000 (see Appendix II for the population of all

incorporated places in the State). Table XVIII gives the number of incorporated places of various sizes found in the State. It is evident at once that most of these towns and cities are small ones. Two interesting facts shown in this table are the marked increase in number of places having 5,000 to 10,000 inhabitants, and the steady decrease in the number of incorporated rural areas.

TABLE XVIII  
 NUMBER OF INCORPORATED PLACES IN ALABAMA CLASSIFIED  
 ACCORDING TO SIZE, 1920-1940

Map V shows the 279 cities and incorporated places in Alabama in 1940. It is easily seen that the largest concentration of cities and incorporated places occurs in Jefferson County, where the densest population of the State is found and where the largest industrial developments are located. The next largest concentration is found in the Tennessee Valley, where the towns have the advantage of vast power resources and river

transportation. The Sand Mountain and Limestone Valley areas (see Map I) have a considerable number of small towns, most of which are local agricultural markets. The Black Belt has two important cities: Montgomery, the State's capital, and Selma, a smaller center. Several towns of some size are found in the Wiregrass region—Dothan, Troy, Greenville, Eufaula, and Andalusia—and many smaller towns are located there. The Piney Woods counties have the smallest number of incorporated places of any region; they are the ones showing the smallest population density in the State. In general, the towns and cities of Alabama are rather widely spaced.

*Race Distribution of Urban Population.* An examination of urban population on the basis of race reveals that, while both whites and Negroes are becoming urbanized, the rate for whites is greater than that for Negroes. In 1900 the Negro urban population constituted 5.4 per cent of the State's total population, whereas the whites accounted for 6.5 per cent. By 1940 the percentage for Negroes (11.5) had little more than doubled, while that for whites (19.1) had almost trebled.

In 1900 the percentage of Negroes (45.3) in urban centers was considerably larger than in 1940 (36.9), although of course the total number is larger for the latter year. In 1900 Alabama had only 27 incorporated places having a population of 2,500 or more. The Negro accounted for more than a third of the total population in 19 of these urban centers, while 9 of them had Negro populations of more than 50 per cent. These 9 cities were Bessemer, Demopolis, Eufaula, Montgomery, Opelika, Selma, Talladega, Troy, and Union Springs. All except Bessemer are located in the Black Belt or in counties adjacent to it.

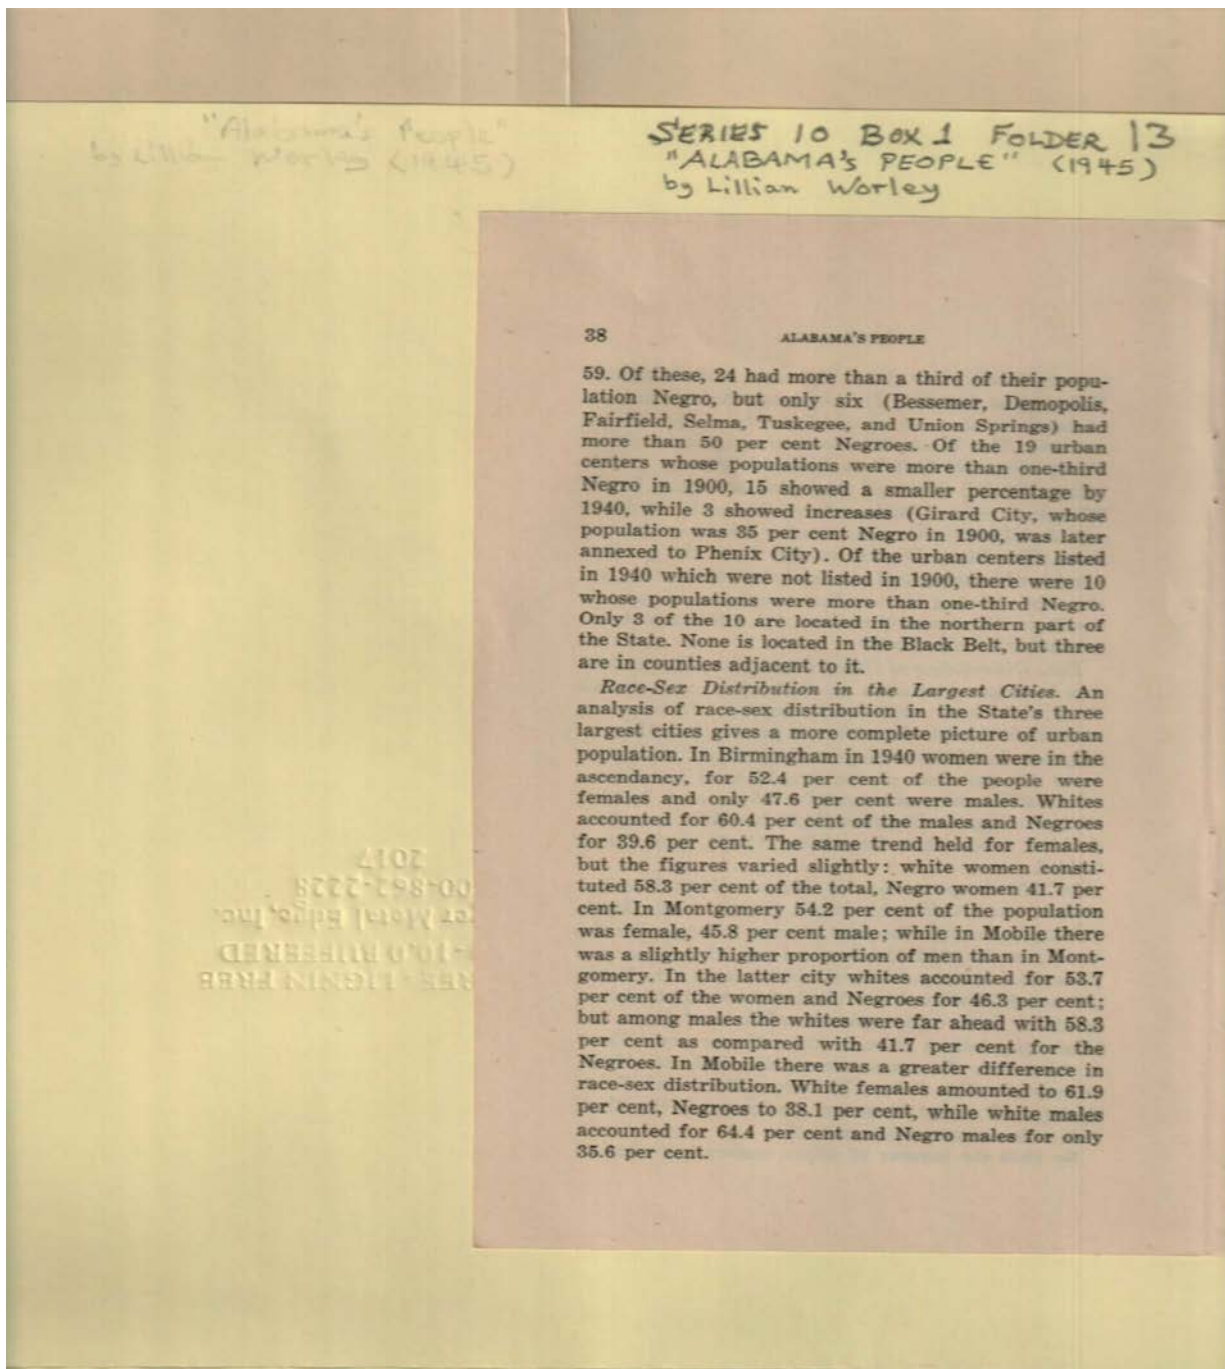

By 1940 the number of urban centers had risen to

*Population Changes in Metropolitan Districts.* The 1940 census defined 96 metropolitan districts, each comprising a central city having 50,000 or more people and in addition all adjacent territory having a population of 150 or more per square mile. The metropolitan district, so defined, was not a political unit, but rather one having certain common social and economic characteristics.

Alabama had three metropolitan districts in 1940, as indicated in Table XIX. A part of the Columbus, Georgia, district lies in this State, but it is primarily

a Georgia and not an Alabama district. Both the Mobile and Montgomery districts were first defined in 1940. In the Mobile area comparative figures for 1930 are not available because much of the area included in the 1940 metropolitan district was unincorporated in 1930. For purposes of comparison the 1930 population of units comprising the present Montgomery district are shown.

\* Estimates adapted from Warren S. Thompson and P. K. Whelpton, *Estimates of Future Population by States* (National Resources Board, Washington, 1934). The estimated totals for Tables XX and XXI do not correspond, since the two computations were made at different times and one is therefore a revision of the other. The discrepancies are not great, however, and in any case they do not impair the value of the tables for the use to which they are put here.

When using calculations of the kind here examined, one must recognize that a slower decline in the birth rate than that assumed, or a more rapid increase in longevity, will result in a larger population than expected. On the other hand, a more rapid decline in the birth rate or a slower increase in life span will result in a smaller population. Similarly, larger or smaller migration movements will cause corresponding differences in the several population groups. Such computations show only what the population will be if the assumed trends in birth and death rates and in migration are borne out.
