

INTERNATIONAL SPACE STATION

ATK THIOKOL PROPULSION

© 2002 ATK THIOKOL PROPULSION

America's Space Shuttle *Endeavour* docks with the International Space Station orbiting about 220 nautical miles above the Earth. ATK Thiokol Propulsion's twin reusable solid rocket motors provide 80 percent of the thrust needed during the initial two minutes of each Space Shuttle flight. We're proud to be a part of the ISS program—the largest scientific cooperative effort in history—drawing on the resources and expertise of 16 nations.
