SATURN V SPECIFICATION CROSS REFERENCE INDEX

THIS DOCUMENT SUPPLEMENTS
THE SATURN V SPECIFICATION
INDEX CM-004-001-2H OF THE
SAME ISSUED DATE.

PREPARED BY I-V-P
SATURN V PROGRAM CONTROL OFFICE

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

SATURN V SPECIFICATION

CROSS REFERENCE

INDEX

1.0 INTRODUCTION

1.1 PURPOSE

The purpose of the Saturn V Specification Cross Reference Index is to Supplement CM-004-001-2H, the Saturn V Specification Index. It is intended to provide a convenient means of finding the specifications by specification number which is cross referenced to Specification Matrix Number and contract end item number. More complete information on specifications including preparation, approval, and contractual status as well as all effective Specification Change Notices (SCN's) can be obtained from CM-004-001-2H, the Saturn V Specification Index which contains the master listing of the same specifications arranged in logical management and functional groupings and listed in Specification Matrix number order. More complete information on hardware can be obtained from various Saturn V Configuration Accounting Indices which list items by in contract end item (CEI) number order.

Requirements for preparation of the Saturn V Specifications listed herein are established in Saturn V Program Directive 15, October 26, 1965, Subject: Saturn V Specification Program.

1.2 SCOPE

This cross reference index contains a complete listing of all specifications required for Saturn V configuration management, from program level through project, system, contract end item, and critical component levels. Specifications are listed in alpha-numeric order by specification number. For each specification, the nomenclature, specification matrix number, Contract End Item (CEI) number, specification type code, and responsible, MSFC Project Office are listed.

1.3 SPECIFICATION CROSS REFERENCE INDEX MAINTENANCE

The data used to prepare this document is obtained from the computer stored master file of data maintained for CM-004-001-2H, the Saturn V Specification Index. This document and the Saturn V Specification Index are issued concurrently on the first working day of each month. Issues of the same date will contain identical information for those elements of data which are common to both documents. Changes to specification data are reported by Saturn V Project Offices, at the time of occurrence, on Specification Index Change Memo (SICM) forms obtained from the Saturn V Configuration Management Branch. Proposed changes are approved by the Saturn V Configuration Management Branch and are cut-off for incorporation on the 20th of the month preceding the date of issue.

1.4 SPECIFICATION MATRIX NUMBER

Specification matrix numbers are assigned by the Saturn V Configuration Management Branch to provide a single, compatible numbering system for control of specification indexing in the Saturn V Specification Index, CM-004-001-2H.

Matrix numbers identify requirements for specifications and relate specifications for planning and control purposes until such time as official specification numbers and CEI numbers are assigned. Thereafter, the CEI numbers are used as the basic reference number for configuration accounting, and the matrix numbers are maintained for purposes of specification planning, scheduling, and status information in the Specification Index.

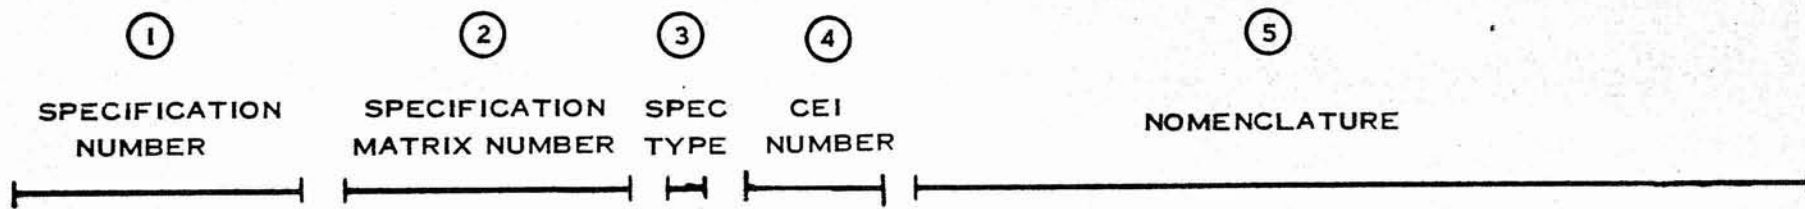

2.0 APPLICABLE DOCUMENTS

The following documents of the exact issues shown form a part of this document to the extent noted where referred to herein:

NPC 500-1	May 18, 1964	Apollo Configuration Management Manual
Saturn V Program Directive No. 15	October 26, 1965	Saturn V Specification Program
CM-004-001-2H	Issued monthly on the first working day	Saturn V Specification Index

3.0 EXPLANATION OF SPECIFICATION CROSS REFERENCE INDEX FORMAT

The Saturn V Specification Cross Reference Index format is illustrated in Figure 1 with data elements identified by encircled numbers from 1 through 5. Table I provides an explanation of data elements identified by encircled numbers to correspond with each data element shown in Figure 1.

FORMAT FOR SATURN V SPECIFICATION CROSS REFERENCE INDEX

TABLE I

IDENTIFICATION AND DEFINITION OF DATA ELEMENTS

① Specification Number

The applicable specification number that identifies the program requirement for a specific design configuration. Only those specifications which comply with NPC 500-1, or those which are considered by the MSFC Saturn V Configuration Management Branch to be suitable for configuration management within the intent of NPC 500-1 are listed. Manufacturing drawings are not considered to be specifications within the intent of NPC 500-1.

② Saturn V Specification Matrix Number

Matrix numbers are assigned by the Saturn V Program Configuration Management Branch to identify a requirement for a specification or a series of specifications. The matrix number is assigned for the purpose of configuration management planning and control, and does not identify any specific equipment or system configuration. When shown in the listing, the specification number defines configuration, and the CEI number is the configuration accounting control reference number. See paragraph 1.4 herein for description of the specification matrix number construction and limitations on its use. Once assigned, a matrix number for a deleted item is not re-assigned to a new item.

③ Specification Type

An alpha indication of the type of specification as follows:

(a) System Type Specifications:

- PS - Apollo Program specification (NPC 500-1, Exhibit I)
- RS - Saturn V Program specification (NPC 500-1, Exhibit I)
- SS - System specification (NPC 500-1, Exhibit I)
- MS - MSFC format system specification (does not comply with NPC 500-1)
- VS - Vendor/Contractor format system specification (does not comply with NPC 500-1)

(b) Contract End Item Specifications:

- CP - Prime equipment CEI (NPC 500-1, Exhibit II)
- CF - Facility CEI (NPC 500-1, Exhibit III)
- CD - Identification CEI (NPC 500-1, Exhibit IV)
- CR - Requirement Items CEI (NPC 500-1, Exhibit V)
- CM - MSFC format CEI specification (does not comply with NPC 500-1)
- CV - Vendor/Contractor format CEI specification (does not comply with NPC 500-1)

3

Specification Type (Continued)

(c) **Critical Component Specifications**

EC - Engineering Critical Component (NPC 500-1, Exhibit II)

LC - Logistic Critical Component (NPC 500-1, Exhibit II)

MC - MSFC format critical component specification (does not comply with NPC 500-1)

VC - Vendor/Contractor format critical component specification (does not comply with NPC 500-1)

4

CEI Number

An alpha/numeric number, assigned by the Contractor or NASA office preparing the specification, which identifies a requirement for a NASA contract end item. CEI numbers are applicable only at the CEI level. Critical components will not list CEI numbers for the CEI in which they are installed. Part I CEI specifications contain a listing of all applicable critical components within the CEI.

When a CEI number is not available, except when the specification status is preliminary ("P"), "NOT AVL" will be shown, and when other information is not available at the time of document revision, the data element will be blank. When an entry is determined to be not applicable, "N/A" will be shown for the data element.

5

Nomenclature

Nomenclature of the item described by the specification taken from the specification title page. (May be abbreviated to fit data processing requirements.)

NOTES - An asterisk appearing in any column indicates that the Saturn V Specification Index, CM-004-001-2H contains a descriptive note applicable to the same specification matrix number.
