MEMORANDUM for:

Subject: Request for Additives and Comments on Draft
Historical Note 57

Attached incomplete draft requires your careful review before bringing it in revised form to the attention of Administrators Webb and Seamans. Completeness and accuracy are the object of this exercise, granting that some of the fuller context in which the NASA decision to use the engineers need not be fully described here.

The author is mainly suggestive on specific aspects of determination of the larger Saturns, of BOB, and Congressional relationships, and of the tenuous details of booster construction requirements in September 1961. What additional detail is germane to the case-study on NASA decision making?

Omissions in this draft text are assumed to be inevitable. Please do not hesitate to scrawl on this copy, provide additional documents or leads, or be very critical. Reasonable promptness will hasten completion of this assignment with best reliability. Please return this copy. A copy of the revision will be provided if desired.

Eugene M. Emme
