

THE Skyliner

**AMERICA'S  
GREATEST  
AMUSEMENT  
ATTRACTION**

Several years ago, the first portable skyliner was built by Goforth Brothers, Inc. Two years later, after operating and field-testing, the portable skyliner was put on the market for sale. Today Goforth Brothers, Inc. is the manufacturer of the most successful ride to come along in recent years. By creating preferences for the skyliner among park and carnival owners, independent ride operators and fair management, there are skyliner owners in many states, portable and permanent. The skyliner is designed to be a complete family ride and not for any one age group and has proven to be one of the top grossing amusement rides.

# PERMANENT OR PARK MODEL

## A cleverly designed chairlift

The park model is designed to take up as little space as possible. For instance, a column in a park will only take a space of 6' x 6' and be 100' to 150' apart or where they work best for you. One end section will require 12' x 25' and the loading platform 20' x 30'. All foundations will be concrete.

Every Skyliner must be designed and engineered for each location. We must have a survey of the line of travel of your proposed layout with elevations every 25' and the length before we could price the permanent installation.

APPEALING TO ALL AGES WITH TREMENDOUS REPEAT BUSINESS.

THE OVERHEAD MOVEMENT OF THE SKYLINER ATTRACTS THE ATTENTION OF PEOPLE IN THE PARK.

# THE Skyliner

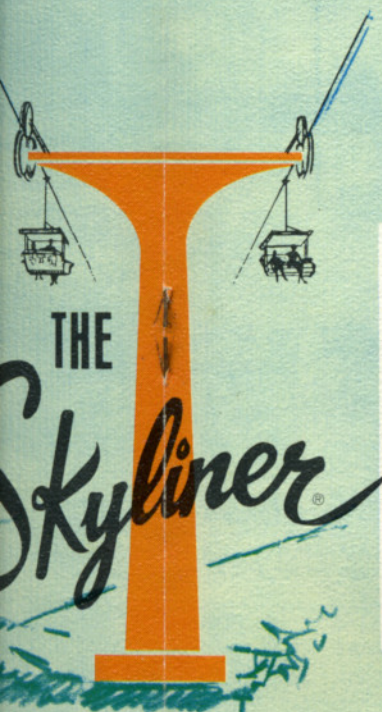

THE SKYLINER IS DESIGNED TO TAKE VERY LITTLE SPACE IN YOUR PARK.

UP THE MOUNTAIN,  
OVER THE LAKE,  
DOWN THE BEACH.

EACH SKYLINER IS DESIGNED AND ENGINEERED FOR EACH LOCATION WITH ALL KNOWN SAFETY FEATURES AND DEVICES BEING USED.

THE SKYLINER IS  
DESIGNED TO  
TAKE VERY  
LITTLE SPACE IN  
YOUR PARK.

THE  
Skyliner®

# INSTALLED ALONG THE MIDWAY

Set up time is approximately 10 hours and tear down time about 4 hours. The columns could make ideal light towers on the midway.

WORLD'S FIRST BUILDER OF PORTABLE SKYLINERS

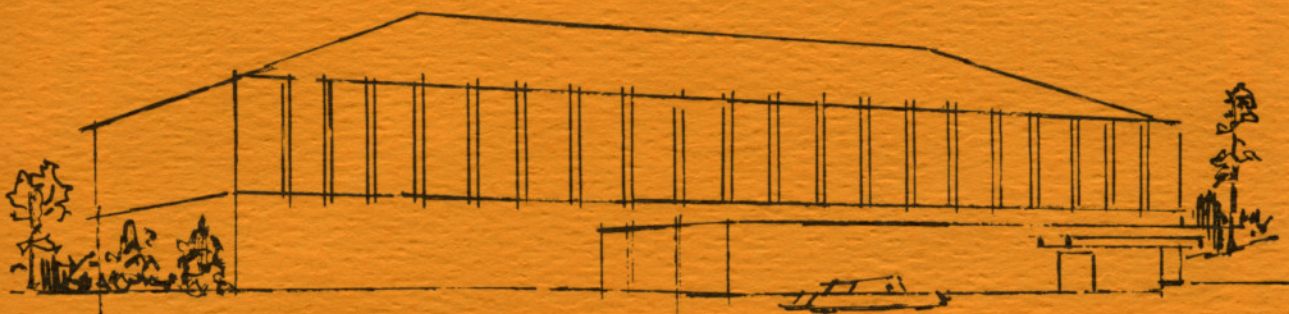

# PORTABLE

# Skyliner®

BY GOFORTH

The portable is used primarily at fairs, shopping centers and sometimes parks. This model is built on two special trailers (manufactured by Goforth) 8' wide and 28' long. It has two columns 22' high and two columns 27' high and 100' apart, with 28 chairs and 1000' endless cable. Different cable lengths are available. The columns are knocked down and loaded on one of the trailers and the chairs on the other trailer for transporting to the next location.

The Skyliner is safe for any age to ride and enjoy. Capacity is 700 (plus) per hour.
