- Center Post 4" Steel Pipe
- Center Post Safety Wheel 24" Diameter
- Composition Rubber at place Center Post enters Top
- Depth of Water for proper Installation - 44" to 52"

Wt. Approximately 800 lbs.

To make your pool, beach, or lake more appealing to bathers, install a "**STRECO**" Steel Spinning Water Top. Bathers prefer Water Tops over all other water or play devices. Whenever bathers are in the water you will find them on the Tops. Simple installation in pools - just cement the center post into the bottom of the pool. For beaches or lakes - a large block of concrete may be placed on the center post for anchorage. LeSourdsville Lake, Inc., located between Middletown and Hamilton, Ohio, has used them for over 30 years. (Yes, the original tops are still in use.) LeSourdsville's management states that the tops are the most used of any device in the lake including the diving boards. Their average swimming attendance is around 100,000 yearly. If your pool or lake needs diving boards, you need **STRECO** Swimming Tops, too. No pool or swimming lake is complete without them.

PRICE - \$ 485.00 - F.O.B. MIDDLETOWN, OHIO
