# Perey Kompak Coinpassor

A big step forward in the design of coin operated turnstiles.  
Combining large capacity, heavy duty qualities and modernity in design.  
Collects fares or admissions speedily with amazing accuracy.

## SOME OUTSTANDING FEATURES

**Saves Labor** — A single cashier can readily supervise sufficient Kompak Coinpassors in battery formation to handle an entire entrance of the busiest subway station serving thousands of passengers per hour.

**Automatic Fare Collection** — The passenger deposits his own Fare.

**Heavy Duty Construction** — Designed for continuous 24 hour service under heaviest traffic conditions — Mechanism sturdy with large factor of safety.

**Saves Space Without Cramping User** — Increases entrance capacity or decreases platform space by 40% over that required by 4-Arm turnstiles.

**Extra Large Money Compartment** — Allows once-a-day collection in busiest subway station if desired. Equipped with removable bags (standard equipment) or metal coin boxes (optional).

**Simple Efficient Coin Operating Principle** — No electric current or connections required. Coin operates no mechanism, it merely acts as key in unlocking mechanism which passenger operates. Positive lock and unlock.

**Highest Speed** — Every known device conducive to high operating speed is incorporated in this turnstile. It is the fastest coin controlled turnstile so far developed.

**Quiet Operation** — Utilizes most advanced silencing methods — hydraulic silencers, noise insulation, elimination of noise producing motions and loose fitting parts.

**Tamperproof, Accurate, Easy-to-Read Register** — Specially designed register built into the mechanism housing and actuated by the hub shaft which revolves as the arms are turned — protected by a housing against manipulation or turnback of register — white figures on black background for easy reading — registers up to 99,999 and returns to zero automatically.

**Artistic Appearance** — Its graceful lines and harmonious color combinations were developed in cooperation with a famous industrial designer.

**Automatic Coin Return** — Returns coins of incorrect denomination to passenger, the turnstile remaining locked.

**Slug Spotter** — Each coin is deposited in inspection compartment to facilitate visual detection of spurious coins.

**Easy Low Cost Installation** — Requires no electric connections. Minimum amount of railing required.

**Special Safety Features** — Smooth finished surfaces, rounded corners, fully enclosed mechanism, no protuberances, arms yielding in locked position to protect even the careless and clumsy.

## OPTIONAL FEATURES

**Two-Way Operation (Pay Enter—Free Exit)** — Coinpassor can be arranged for coin control with registration in one direction, free turning without registration in opposite direction. This arrangement is used where it is desired to collect a fee in one direction and allow passage through the same Coinpassor in opposite direction, without fee.

**Reversible Operation** — For One-Way Operation in either direction, reversible at will through simple key controlled mechanism.

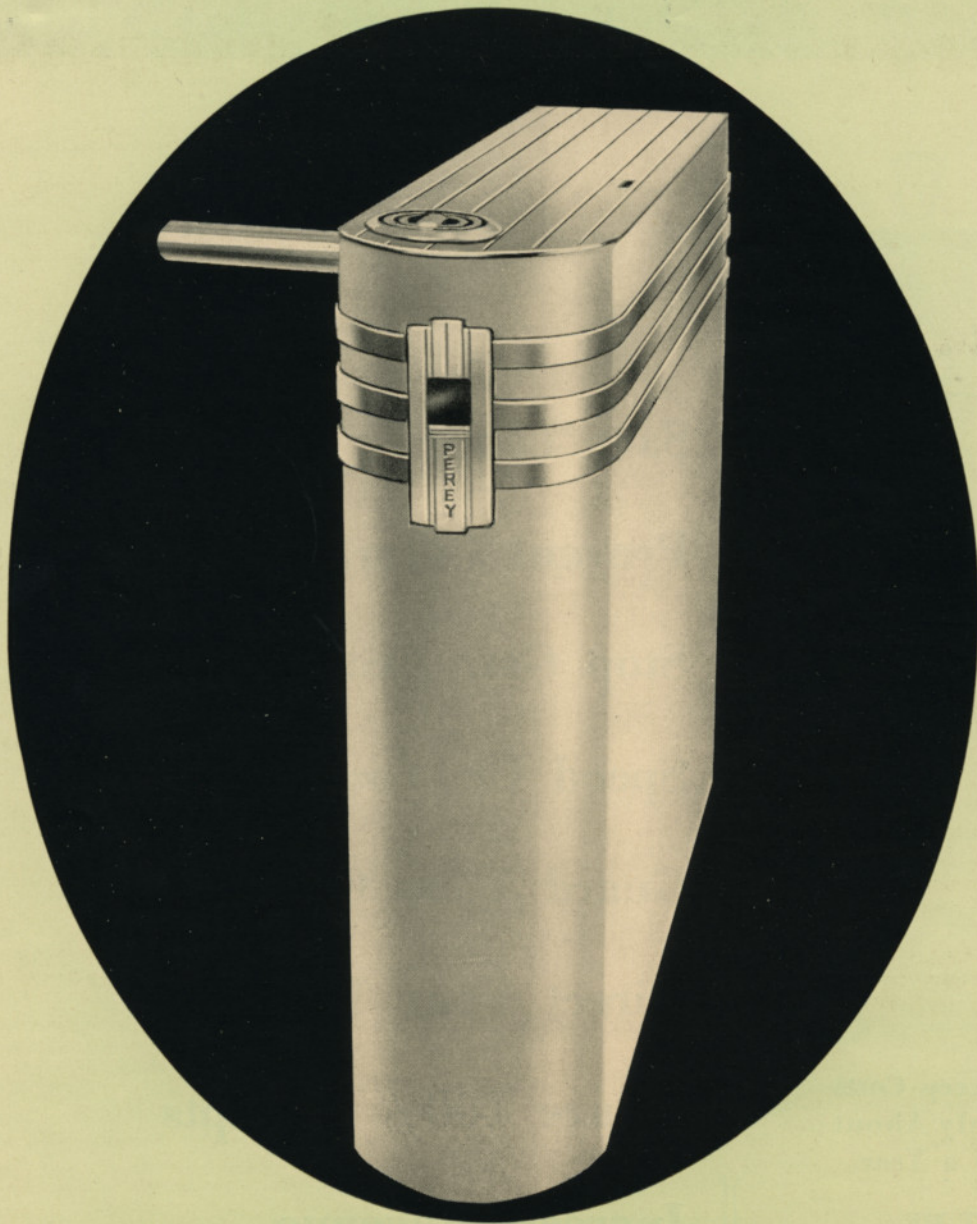

**For Single Coin or Token at All Times** — Coinpassor is arranged for one denomination coin or one size of token. No other will unlock it. This arrangement is intended for use where the same amount is to be collected from everybody at all times.

**For Coin and Token at Same Time** — Coinpassor is arranged to operate on a coin and one or more tokens, or on two or more tokens of certain related sizes. This arrangement is suitable for use where different classes of patrons are admitted at the same time at different rates.

**For Different Coins or Tokens at Different Times** — Equipped with a combination coin chute, the Coinpassor operates on two or more different coins or tokens, but only one denomination coin or one size token at one time. The changeover from one denomination of coin or size of token to another can be made in less than a minute.

**For Two or Three Coins with or without Token** — Coinpassor is arranged to operate on such fares or admissions as 15 cents (nickel and dime), 20 cents (2 dimes), 30 cents (quarter and nickel), 45 cents (2 dimes and quarter) etc. If token is used, Coinpassor can be arranged to give patron choice of depositing coin combination as described above or of depositing token.

**Convertible Model for Use as Coin-controlled or as Registering Turnstile** — By means of a simple device, the coin control mechanism can be disconnected and the Coinpassor converted into an Automatic (normally unlocked) Registering Passimeter. It is equipped with a locking lever by which attendant can prevent unauthorized passage when being used as a Passimeter. A removable key quickly converts it from one method of operation to the other.
