

Rental Karts must be TOUGH

SIMPLEX MARK V

The Simplex Mark V Rental Kart is especially engineered to KEEP RUNNING under the most strenuous rental conditions.

Kart rental tracks are springing up all over the country and data collected by Simplex Manufacturing Corporation on rental kart operations over the past year and a half shows kart maintenance to be one of the big expense items in an otherwise extremely profitable business. The Simplex Mark V rental kart shown has proved to be the answer to this problem. The Mark V has reduced kart maintenance to the point where this item is no longer considered a major expense. The Mark V rental kart meets or exceeds every insurance company specification. The Mark V features the extremely sturdy Simplex chassis together with dual two shoe automotive internal expanding brakes (as required by most insurance companies) with 20 square inches of braking surface. The new Simplex double front axle also serves as a front bumper to protect the steering mechanism. A new rear bumper is also standard equipment and is designed to prevent rear wheel climbing by following karts. Retail price of the Simplex Mark V rental kart with slick tires all around and equipped with Clinton 990, 4 cycle, $3\frac{1}{4}$ H. P. engine is \$245.00, freight prepaid. The same kart equipped with a Kohler, 4 cycle, 4 H. P. engine retails for \$265.00, freight prepaid. Both of these engines are low maintenance, work horse types and are particularly suited to rental tracks. Where noise might become a problem for the track owner Simplex will equip the Mark V with a rental muffler which reduces engine noises to no more than that heard in a modern automobile. This muffler costs \$10.00 extra. The seat cushions are also extra at \$12.95 each. The Simplex Mark V rental kart can also be purchased with less expensive engines but the sturdier types mentioned are recommended. Additional bolt on spring steel bumpers are also available at \$15.00 per set.
